## **EBM Administration: From Fridge**

#### Scenario

 $(\mathbf{1}$ 

EBM has been stored in a fridge. It must be transferred out of fridge, prepared (decanted) if required and then administered.

Please perform Transfer process on handheld device when moving EBM out of a fridge or freezer. MilkTrac will then activate a 4 hour transport expiry timer which will remain active until EBM is stored or administered.

How to guides for transfer, storage and preparation can be found by clicking on the following links:
