9. Complete **“On Leaving”** and include **“Reviews”** if appropriate.
10. Update **“Personal Timeline”** to attach any leaflets or information you the woman to have.
11. Publish observations and management plan to Badger Notes for the woman to see. ***(Please see the separate user guide about what a woman can see in Badger Notes)***
12. Ensure before you save and close the assessment that you add a follow-up appointment from the right-side bar and select any additional forms needed such as bloods/microbiological tests/VE’s.

**Follow-up Events**

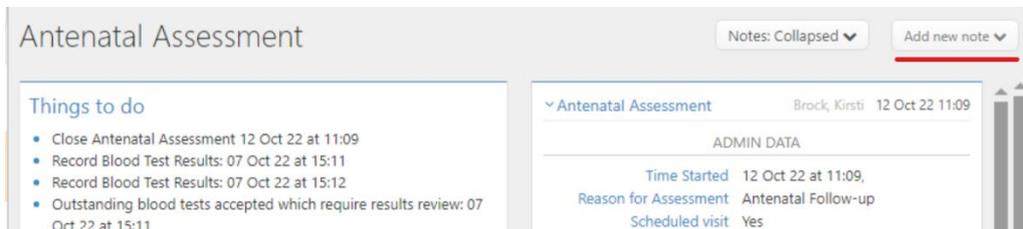

- Follow-up Appointment
- Induction of Labour
- Elective C-Section Booking
- Specialist Review
- Home Assessment

**Updates**

- Lifestyle Update
- Social Issues
- Social Update
- Social Assessment
- Routine Enquiry
- Antenatal Management Plan
- 🔔 Care Plan

### Adding new note

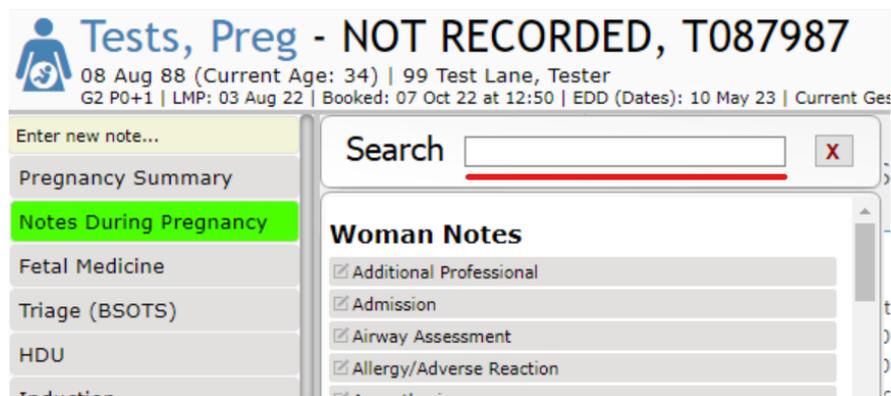

If you save and close the assessment you can add additional forms by clicking on “**Add New Note**” for example, if you need to add **Blood Tests and Results/Microbiological Tests**.

13. Check and complete the relevant tasks within the “**Things to Do**” block during every contact.

### Adding Additional Notes

If you wish to add something specific to the record you can use the search feature. Go to “**Notes during pregnancy**” and search for the relevant form by free typing.

### Grow Charts

Please note that you must be working in the **online** version of BadgerNet to be able to see new SFH plots on the grow chart. If you are online, when you input the SFH measurement, the growth chart will automatically show. If this does not automatically show, you can find it by searching for “**grow options**” within the search bar above. You can also see these buttons within the antenatal assessment.

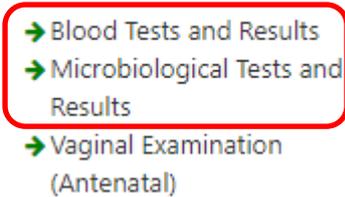

However, it is important if you are in the **offline** version that you visually check where your plot should be on the electronic chart before the woman leaves. Once you are connected back to Wi-Fi and log in, this data will upload automatically and the most recent measurement will be available for viewing. **It is important that you upload any data you have input offline on the same working day.**

## **Blood Tests and Results / Microbiological Tests**

All blood tests must be input into BadgerNet in order for the results to pull through from E-record. There are a few ways this can be accessed:

1. On the other events (right side-bar) when you open the antenatal assessment

### Other Events

- 
- Blood Tests and Results
  - Microbiological Tests and Results
  - Vaginal Examination (Antenatal)

2. Using the search function as above and typing in **“blood tests”**
3. Using the **“add a note”** function within the assessment

## **All other forms**

Other documentation forms can be found in the above ways.

## **Referrals**

If a woman is identified as needing a mid-pregnancy antenatal clinic referral or request for an appointment, please send a **“Mid-Pregnancy Antenatal Clinic Referral”** so this can be actioned by community admin. You can do this by searching within the **“Enter New Note”** function and creating the referral. Ensure when completing this referral that you choose which clinic the woman needs to be put into.

## **Things that will remain unchanged**

- Perinatal mental health referrals
- Local safeguarding referrals to Newcastle
- GTT appointments needed after booking
- Ultrasound scan referrals through MAU/Day-care

## **Working offline**

**If you have been working offline in a clinic or at a home visit, you must ensure that you connect back to Wi-Fi in your base/hospital or home to upload the data within that working day. If you do not upload this data, it will not be seen in the live record until your device has a connection. It is mandatory that all data is uploaded within that working day.**

If you require any further support or training please email [Nuth.badgernetmaternitysupport@nhs.net](mailto:Nuth.badgernetmaternitysupport@nhs.net)

### Antenatal Follow-up Checklist
